Hi there again. I'm Khanya Gope

A passionate developer, reader, designer and writer.

Started coding at school (grade 9) using Delphi. I created apps for hotel bookings and really fun games for any kind of age.

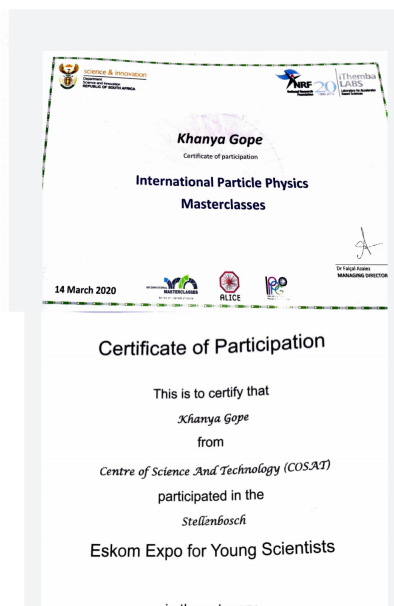

I'm also a big fan of politics and physics. I've been part of the radio shows at school talking about politics and current affairs. My passion for physics started when I was in grade 10. Since then I've been attending Science Expo to implement and talk about my brilliant ideas to the public (even though they might seem impossible). I was also part of the chosen students on a job shadowing at iThemba Labs to learn about quantum mechanics and quantum computing.

 Ever since then I've been passionate about the both topics until today I'm attending an online course that teaches deep high standard content about quantum computing.

Designing is a passion I started to develop in 2020. I still don't know how I got to love it but I'm glad I love it.

Luckily some people noticed my drawings and ask advice for their house plan and painting.

Reading as been my things since 2016, and up until today I own more than 300 books. Every year I read about 40 or more books. I've donated 100 of my books to the libraries and some of them were sold on Instagram. (if you want to see my bookstagram page : khanyas_journey_with_books).
